

SAFETOUCH™

Guest Pager

THE ANTIBACTERIAL GUEST PAGER

Long Range Systems is proud to offer the newest addition to our paging line - SafeTouch. This handheld **ANTIMICROBIAL** pager prevents passing germs by killing them instantly on contact.

With these easy-to-hold devices, you ensure messages are sent and received instantly, streamlining the waiting process and, most importantly, enhancing the customer experience.

SafeTouch features a customizable ad space to promote your website, deals or menu items. With SafeTouch, you can display your daily specials or happy hour times on the front of the pager.

SafeTouch also gives you the best range possible, with reach through walls and ceilings and will not interfere with wireless sound systems. UHF is the preferred frequency for better signal penetration to ensure your guests will be notified without dropped pages.

When paged, the SafeTouch pager continues to vibrate and flash, to help guarantee guests will receive their notification. The continuous flashing alert also ensures pagers aren't misplaced or lost.
